

LUND UNIVERSITY
Faculty of Science

The LUNE-project

Let us show you that science is both useful and fun – visit the LUNE-days at Lund University!

LUNE stands for the joint effort of Lund University and the National Encyclopaedia (NE) to raise interest in science.

During the LUNE-days, taking place one week in June and one week in August, 12-15 year old students are welcome at Lund University to watch our popular science shows on physics, chemistry and biology. This visit to Lund is combined with active

search for more knowledge on the websites of the National Encyclopaedia.

The LUNE days are organized twice per year. Please, ask the contact person for more details.

Target group: One week for 6-7th graders, one week for 8-9th graders, elementary school

Subject addressed: Physics, chemistry and biology

Restrictions in the number of visitors: Several school classes can visit each show
